

# Code Breaker - Skeletons Backbone Pt 2

// Sparking Challenge Code Breaker

## Example

English Letter Frequencies

| E    | T   | A   | O   | I   | ... | ... |
|------|-----|-----|-----|-----|-----|-----|
| 12.7 | 9.1 | 8.2 | 7.5 | 7.0 | ... | ... |

Letter Frequencies & Mapping

| Letter | Count | Frequency | Substitute |
|--------|-------|-----------|------------|
| B      | 5     | 0.5       |            |

## Description

We will now add the interface that enables us to do the substitution! Let's create a reference which will be the English language letter frequencies, and a mapping table that will perform the substitution according to our input.

You are to create:

- A div with `id="analysis-container"`, containing the following:
  - An empty paragraph (`id="subd-text"`)
  - A table that shows the English letter frequencies (`id="frequency-table"`)
  - A table that prepares the substitution cipher. The table should have exactly 4 columns and 26 rows (`id="key-table"`)

- Once you have checked, hide the `analysis-container`
